

SUSTAINABLE PACKAGING

Working towards a circular economy

We're excited to announce that we are transitioning our sachets to recyclable #5 PP polypropylene plastic. This change is part of our ongoing commitment to sustainability and the environment.

Polypropylene is widely used in various everyday items due to its durability and safety. Here's why we chose it:

- ⚙️ **Versatile and Safe:** Used in food containers, bottle caps, and tupperware, polypropylene doesn't absorb water and has a high melting point, making it perfect for our products.
- ⚙️ **Environmentally Conscious:** While it's not biodegradable, polypropylene has a lighter carbon footprint compared to other plastics. Recycling polypropylene can cut emissions by up to 50% compared to virgin plastic.
- ⚙️ **Fully Recyclable:** Though recycling rates are low due to lack of infrastructure, polypropylene is recyclable. We encourage you to check with your local authority about recycling options in your area.

SUSTAINABILITY AT THE CORE

By making this switch, we are ensuring:

- ✓ **Fewer Greenhouse Gas Emissions** in production
- ✓ **Less Environmental Impact** compared to other plastics
- ✓ **A Step Towards a Greener Future:** Small changes add up, and this is one of the many steps we are taking to minimize our environmental footprint.
